May 2008: Release of version 1.4.2

This version loads a few patches on the size of fields tables. It integrates completely and better management of languages. Thanks to the contribution of Xavier Lemoine and Franck Becker, we help Mydyngallery to be respectively in English and German in a native component.

I also took advantage of this version for review section "personalization" now called "general settings."

So a better finished and more successful.

I now devotes to achieving Mydyngallery 1.5 for Joomla 1.5.

As always, you can submit your desires or report a malfunction in the forum.

I hope soon.
Jerome Lamiot
